

Arsenic Contamination & Findings of Arsenicosis Patients in Patkhauli Village of Nawalparasi District and Other Parts of Nepal

Dr. Roshan Raj Shrestha

Environment & Public Health Organization
(ENPHO)

Arsenic ?

- Arsenic is a metalloid toxic element also called “Secrete Poison”
- It can be found in water, air, food, soil etc.
- The total daily intake of Arsenic by the general population is usually less than 0.2 mg/day.
- Exposure to arsenic through ingestion occurs mainly by drinking As contaminated water.
- WHO standard for Arsenic in drinking water 10 ppb and Nepal – 50 ppb
- Symptoms of Arsenic toxicity can be observed within 2 to 10 years of exposure. However it depends upon the exposure level, nutritional status, metabolism and genetic factor of individual.

Release of Arsenic Contamination in Groundwater

- Not clearly known
- Natural geological changes are presumed to be the primary reason for arsenic contamination
- Arsenic Release Mechanism in groundwater
 1. Oxidation of Arsenic Bearing Minerals
(Arsenopyrite – FeAsS)
 2. Natural Process – Oxyhydroxide reduction”
 3. Anthropogenic causes

Clinical Feature of Arsenicosis Patient

Pre Clinical Stage

Not detectable by clinical manifestation

Initial Stage

Melanosis, Keratosis, Bronchitis, Gastroenteritis

Clinical Feature (..... Cont)

Second Stage

Depigmentation – rain drop pigmentation,
Hyperkeratosis, Oedma of legs.....

Clinical Feature (..... Cont)

Last Stage

Gangrene, Cancer (skin, bladder and lung)....

Health Impact Study in the Arsenic affected Areas of Nepal

Dr. Mathura Prasad Shrestha

Senior Health Advisor

(Drinking Water Quality Improvement Program- NRCS/ENPHO)

Findings

Health Survey Results

Health Survey was done by NRCS, DWSS and FINNIDA in its project areas

Note: Tube wells that had arsenic $>50\text{ppb}$ were only considered for the study. Thus the entire population is not covered or population consuming from particular tube well is only covered

Pictures

Medical Doctor from Bangladesh confirming the suspected patients in Nawalparasi

रामप्यारी घरमा गइन् र ट्यूबवेल्को पानी खिचिरहेका आफ्नो बुबालाई शंकालु मनले भनिन् "बुबा ! हाम्रो ट्यूबवेल्को पानी खानयोग्य छ होला ?" उनको बुबाले भने "हाम्रो ट्यूबवेल् पोहोर मात्र त्यत्रो पैसा खर्चेर अनुमती मिस्त्रीले गाडेको र यस ट्यूबवेल्को वरीपरि सिमेन्ट समेत लगाएको हुँदा खानयोग्य नहुने त कुरै छैन ।"

आर्सेनिक !

आर्सेनिक समस्या र समाधानका बारे बुझिराख्नु राम्रो ।

सुन सुन बाजुबाई सुन झैको बनिने सः ।
कतै कतै बलको पानीमा आर्सेनिक मिसिरहेको ।

आर्सेनिक भन्ने तत्व मनुष्य विष पैछ ।
त्यसैले त हामी सबैले पुष्पचन्दु पर्छ है होस ।

जानी राख्ने, बुझी राख्ने राम्रो बनेने ।
ज-आफ्नो बलको पानी जेवाउँ हामीले ।

बिगर्छ बसले मराउने भन्ने स्वाच्छन्दलाई जानी ।
छोडी हाली खान र पकाउन बस्ने नराख्ने पानी ।

धक, धम केही पनि थाक्नु पर्ने छैन ।
आर्सेनिकबाट हुने रोग सन् रोग होइन ।

हरियो सब्जी, कलमूल, माछामासु खान्छ जसले ।
आर्सेनिकबाट लागेको रोगलाई कम पाउँ बसले ।

त्यसैले त फेरि हामी सबैले बुझौं ।
ज-आफ्नो बलको पानी चुक्नु जेवाउँ ।

जानी राख्ने बुझी राख्ने यसबाट बच्न ।
गई हाली खानेपानी कार्यालय आर्सेनिकबारे बुझ्न ।

राष्ट्रिय आर्सेनिक निवेदन समिति
सामनेको बम बम निवेदन निवेदन
पर्सिभरे, बलको

आफ्नो पानी, चुझौ र अरुलाई पनि बुझाऔं ।

आफू जान्ने, अरुलाई भन्ने, सबै मिली प्रयास गरौं ।

ट्यूबवेल्को पानी पीएर मरने घरे ।

आर्सेनिक भएको पानी खाने ट्यूबवेल्को टुटिप बेसी
बुझ्नु जसले जान्ने पानीको कडा (टुटिप) बिच
बिचै चुक्नुपर्छ कडाको ।

Cross Section of ABF

Pathogen & Arsenic Removal Mechanism

A : Physical Removal by surface straining – Bacteria are too large to pass through the sand layer

B : Biological removal by predation - The microorganisms living in the biofilm consume incoming bacteria.

Arsenic Removal Mechanism

Water

- **Ferric hydroxide (iron rust) is an excellent adsorbent for arsenic.**
- **Surface complexation reaction occurs when aqueous arsenic species come into contact with Fe^{+++}**

- Tested 1476 samples – ENPHO test kit & AAS
- Installation of community level arsenic bio sand filter as a pilot scale.
- Formulation of tubewell installation policy
- Training to technicians

DM 2003 Project Activities

- Established Kanchan Arsenic Filter Reference Center
- Trained and Established 10 local entrepreneurs at 11 arsenic affected districts – distributed about 1500 filters
- Monitoring and investigation
- Orientation workshop in 750 Wards of 150 VDCs

Future Program

- Conduct several trainings to district level health professionals
- Establish more local entrepreneurs
- Health Survey in other affected villages
- Awareness campaign
- Provide services for mitigation
